Huiracocha's Astrological Associations in the Human Organism

The Planets and Zodiacal Constellations not only act on the exclusively identified parts, but also have secondary influences and direct their powerful action onto other parts as well.

Matter is nothing but Crystallized Spirit, and since all Matter radiates, then that radiation is the Cosmic Force. Upon entering this current (or stream of Cosmic Forces) we can prepare the way for Solar spiritual activity. In every Human Being there are two currents or streams of energy which influence them. We have to differentiate between the two currents:

1. One of these currents comes from above, from heaven, from the invisible world, from the heights of the Cosmos
2. The other one from below, from the Earth, from what is solid

These currents, both from above and from below, pass through the body which is full of 'screens' or 'filters' (in one sense or another) in each region of our organism until they meet in the Heart... The currents (which oppose one another) also encounter each other in our organism which has the most perfect laboratory for transmutation: this laboratory is the Heart. Thus the Disciples should consciously approach this moment by looking for Initiation within themselves, because it is the Sun (within ourselves) that offers this to us.
